

# Living things and their habitats - Science

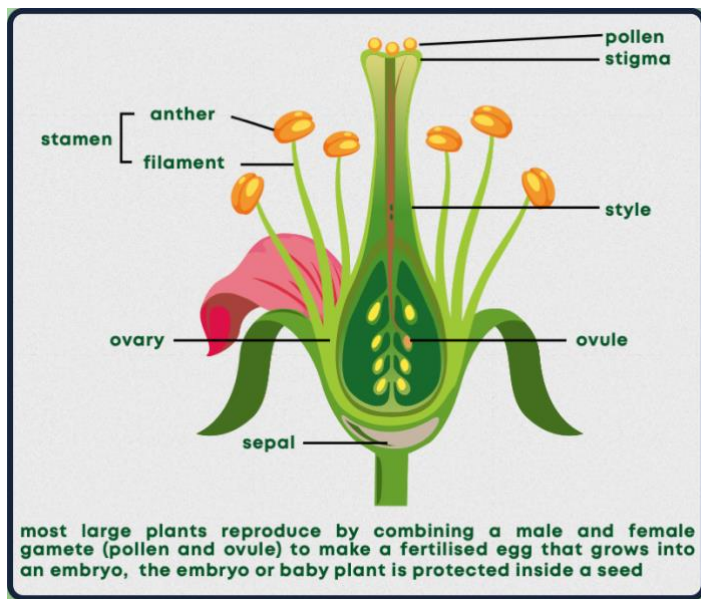

**Life cycle** - a series of changes in the life of a living thing, including reproduction.

**Reproduction** - the production of offspring by a living thing.

**Mammal** - a warm-blooded vertebrate that has live young and hair or fur.

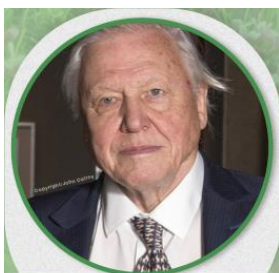

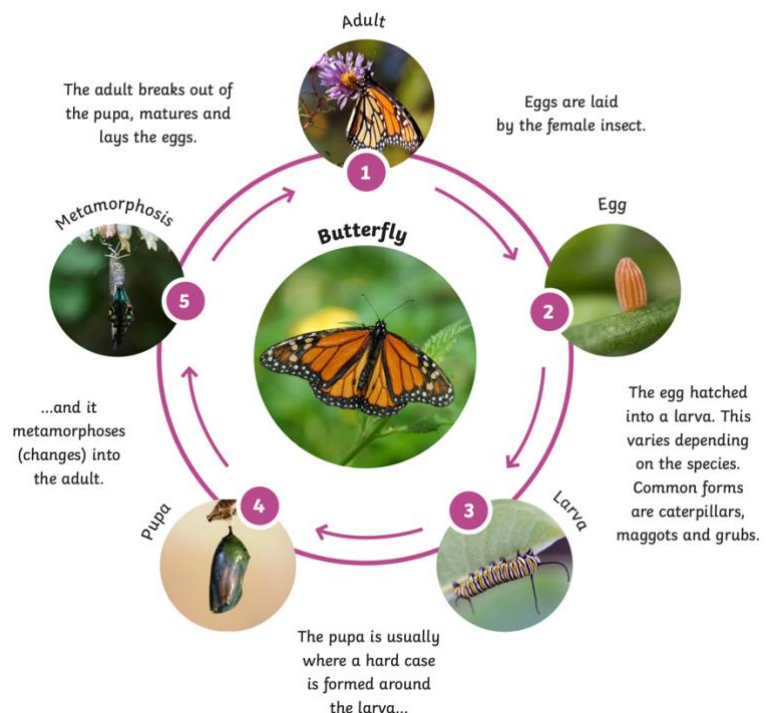

**Amphibian** - a cold-blooded vertebrate that begins life underwater and develops the ability to breathe and live on land

**Metamorphosis** - the process of transformation to adult form where a creature completely changes.

## The Insect Life Cycle

### Complete Metamorphosis

**Sir David Attenborough**

a broadcaster and natural historian

**Dame Jane Goodall**

a primatologist and world expert on chimpanzees

**Incubate** - when a creature sits on eggs to protect them and keep them warm before they hatch.

**Interconnection** - a connection between two or more things.

**Larva (larvae)** - very young insects or amphibians, before they transform into adults, e.g., caterpillar
